Nairobi, Kenya

0745071010
kabura.n.joan@gmail.com

Summary

AI and automation-focused Computer Science professional with hands-on experience building AI-assisted workflows, structured content systems and automation pipelines using Python, Selenium, NLP tools and node-based workflow logic. Experienced in AI-assisted development, prompt structuring, content processing and workflow troubleshooting with strong written English communication. Interested in scalable automation systems, content operations and practical AI workflow environments.

Experience

JOAT Kenya / AI-assisted automation engineer

Feb, 2025 - Apr, 2026, Kiambu Rd, Kenya

At JOAT Kenya, I lead innovative projects at the intersection of technology, gaming, and automation. My role involves designing and developing interactive games, creating seamless automation workflows, and building scalable software solutions that enhance user experiences. I leverage AI tools and modern programming languages, game engines, and automation tools to transform ideas into practical digital solutions, while continuously exploring emerging technologies to drive innovation.

- AI tools: Claude code(Anthropic), Gemini, OpenRouter.
- Automation: streamlining processes using AI tools, n8n, .
- Assisted with AI-assisted website development and structured digital workflow projects.
- Game development: concept design, mechanics, UI/UX, and deployment.
- Problem-solving: integrating creative solutions to complex technical challenges.

SmartBrains Kenya / Web development and robotics teacher-EduTechAI

May, 2024- Aug, 2025, Nairobi

- Teach a range of programming languages (HTML/CSS, JavaScript, Arduino) and software development practices. Evaluate student progress and provide helpful feedback to facilitate skill improvement.
- Organize coding projects, competitions, and workshops to promote hands-on learning.

Education

University of Nottingham / Bachelor of Science – Computer Science & Artificial Intelligence

Sept 2016 - May 2021, Nottingham, United Kingdom

Computer-Science-with-Artificial-Intelligence-BSc <https://www.nottingham.ac.uk/ugstudy/course/>

Moringa school / FlatIron School Data Science Course

Apr, 2023 - Apr 2024, Ngong Rd, Kenya

Understanding Data Science and AI concepts and algorithms.

Skills

- Claude / ChatGPT / Gemini / OpenRouter
- Prompt structuring and refinement
- Workflow design and automation
- Git / GitHub
- SEO basics
- Content research
- Digital workflow organization
- Technical writing

Projects

AI content creation engine Nov, 2025 - Present, Nairobi

GitHub: https://github.com/kafura0/ai_content_engine

Prototype: <https://joat.studio/clients>

- Built an AI-assisted content workflow system powered by Claude and Gemini models through OpenRouter.
- Structured prompt workflows for generating, refining and organizing social media and content outputs.
- Focused on improving output quality and workflow consistency while optimizing lower-cost AI model usage.
- Explored automation-oriented publishing and content management workflows.

N8N workflow _ CMS/SMA Nov, 2025 - Present, Nairobi

- Built and tested node-based automation workflows involving API integrations, content handling and workflow triggers.
- Explored automation logic for repetitive content and operational tasks.
- Focused on improving workflow efficiency and reducing manual processing steps.

BI Platform – AI-Powered Business Intelligence SaaS Feb, 2026 - Present, Nairobi

A production-grade, multi-tenant BI platform where businesses upload data, auto-generate dashboards, and query insights using natural language AI.

Multi-tenant online store/ POS/ Business analytics system Feb, 2026 - Present, Nairobi

A self-hosted, multi-tenant headless commerce engine that lets African SMEs launch branded online stores, accept local payments, manage their business, and grow with analytics-driven intelligence.
